403241

MEMORANDUM TO: All Division and Group Leaders

FROM: Colonel L. E. Seeman

Certain functions of the Manhattan District not directly associated with Site Y have expressed a need for the assistance on the overseas test of additional enlisted men who have some technical background. The use to which these men will be put is not clear, but will probably consist of duties as recorders, or assistants to other technicians. (The request came from Colonel Warren's medical group).

The District Engineer wants to use this as an opportunity to reward Manhattan District personnel who would like to make this overseas trip, the only catch being that they would have to agree to forego any discharge rights until after the completion of the wet test, whenever that might be.

Information is requested as to whether or not you have any volunteers you can spare who would care to take advantage of this opportunity. Please expedite your replies as we must furnish this answer to Oak Ridge at the earliest possible date. Our quota of allowable assignments will probably not exceed twenty-five in number.
